This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.

This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards. This is a generated test document for the Rifinit compression benchmark. It contains ordinary body text so the writer has real text to preserve, and so a compressed copy can be checked for searchable text afterwards.
